Correlations, Pearson Product-Moment see PEARSON PRODUCT-MOMENT CORRELATIONS

CORRELATIONS (STATISTICS)

Describes the strength of the relationship between two variables; values can range from -1 to +1 where 0=no relationship, +1=strongest positive relationship (A+B increase together), -1=strongest negative relationship (as A increases, B decreases). Used as a print heading for material about statistical correlations. Used as a nonprint heading to identify research studies which employ this technique.

DIABETIC KETOACIDOSIS

Complication of diabetes resulting from severe insulin deficiency coupled with an absolute or relative increase in glucagon concentration. The metabolic acidosis is caused by the breakdown of adipose stores and resulting increased levels of free fatty acids. Glucagon accelerates the oxidation of the free fatty acids producing excess ketone bodies (ketosis).

DRUG RESISTANCE

- Diminished or failed response of a human, animal, disease, or tissue to the intended effectiveness of a chemical or drug. It does not include the resistance of micro-organisms to drugs for which DRUG RESISTANCE, MICROBIAL is available. It should be differentiated from DRUG TOLERANCE which is the progressive diminuiton of the susceptibility of a human or animal to the effects of a drug, as a result of continued administration.

EOSINOPHILIA-MYALGIA SYNDROME

A complex systemic syndrome with inflammatory and autoimmune components that affect the skin, fascia muscle, nerve, blood vessels, lung, and heart. The varied symptoms include severe muscle pain and abnormally high numbers of eosinophils. This disease has presented itself only in people taking the amino acid L-tryptophan and it is believed that a specific impurity in lots of L-tryptophan made by a single manufacturer may be the cause of the syndrome.
